ATR Extended Fuselage Protection

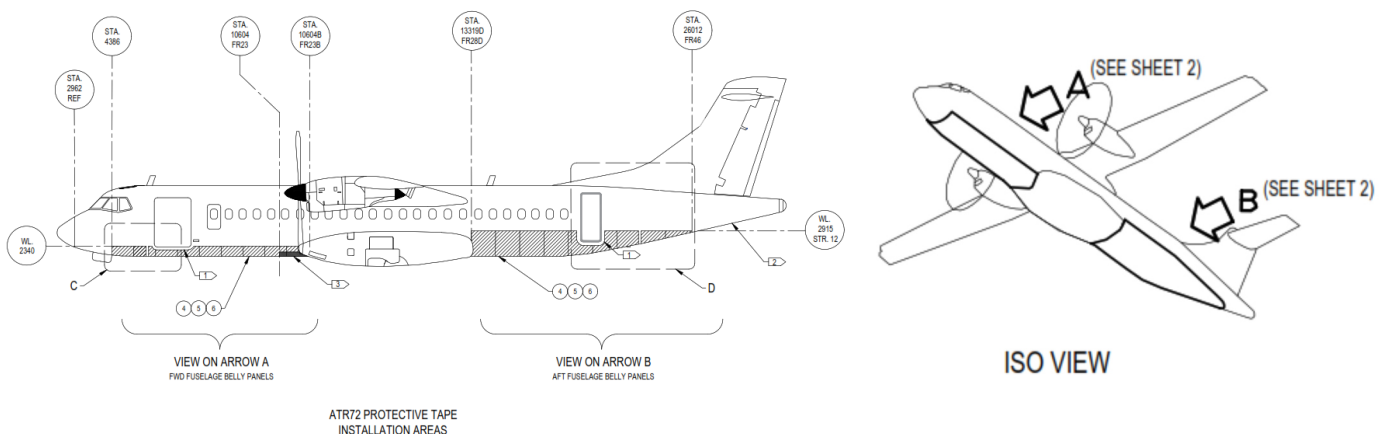

The Extended fuselage Protection for
Unpaved Runway Operations on all
ATR 42 / 72 Aircraft

SOLUTION:

This EASA approval extends the installation of Fuselage protection along the underside of the Lower Fuselage on both the ATR 42 & 72 aircraft types.

This STC compliments our existing STC approved for the protection of the Lower Fuselage Belly fairings and enables customers to choose to fully protect the underside of the aircraft for unpaved runway Operations.
